Kenneth Ward, Project Engineer at Kunsan Resident Office, was awarded the Modern Day Technology Award at the 2017 Black Engineer of the Year Awards Conference held in Washington D.C. Feb. 9-11.

Each year the Black Engineer of the Year Awards (BEYA) Conference recognize and honor minorities who have made significant contributions and breakthroughs in science, technology, engineering and mathematics (STEM) fields.

“Being multiracial (African American/Korean), this award reflects values that both my mother and father instilled in me when I was younger,” Ward said. “With my father being prior military and my mother being Asian, I think both of them teaching respect as a key component of life got me to where I am at now.”

Ward began his Corps career as an intern at the Savannah district in 2009. Before arriving at the Far East District in 2013 he deployed to Kandahar, Afghanistan as an office engineer.

“One thing I will never regret is moving around with the Corps,” said Ward. “I was able to learn and work with great people including quality assurance representatives, program analysts, counsel, and various contract administration personnel. It allowed me to fully understand the Corps process and how everything is interconnected.”

Ward praised his past supervisor at the district’s Central Resident Office, Jamie Hagio, as well as his current supervisor at Kunsan Resident Office, Chris Martin for helping him attain this recognition.

“They allowed me to learn under more experienced personnel,” explained Ward. “I may not know everything about construction, but I am willing to learn and work in a team environment. This includes working as a team with other district branches, the user, and the contractor.”

BEYA’s first event was held in Feb. 1987 at Morgan State University in Baltimore Maryland. The BEYA STEM Conference is a talent-rich environment for recruitment, networking and professional development. In attendance are college representatives and thousands of elite professionals and students from across the country that represent the upper echelon of science, technology, engineering and mathematics disciplines and careers. More than 100 companies and organizations support the rise of new graduates into technical careers such as; U.S. Army Corps of Engineers, Lockheed Martin, Boeing Company, Northrop Grumman Cooperation., U.S. Army and U.S., Navy.

**To The Point: Diversity**

By Valerie S. Bradley  
FED Equal Employment Opportunity Office

We work for the Army and in particular for the U.S. Army Corps of Engineers, an organization that demands equality no matter our race, color, sex, age, national origin, genetic information, or whether or not we have a disability. The question, then, is “How does diversity benefit your organization?”

In short, diversity increases efficiency. It is the mechanism that allows the most qualified individual to get a job, a promotion, or an award. Equality removes the shackles of prejudice that bind our decision making process. To illustrate, when managers refuse to evaluate female applicants for a position, they exclude 50 percent of the population for no other reason than their sex. By so doing, they increase their chance of missing applicants who bring valuable skills to their organization.

To be clear: diversity does not, in and of itself, guarantee success. Rather, by expanding our normal purview beyond our homogenous group, diversity increases the probability that the agency will find skills, experiences and even perspectives that lead to organizational growth and maturity.

This month in FED History

- **February** 1983: Daegu American School at Camp George opened.
- 1986: Non-Commissioned Officer and Enlisted Men’s Club opened at Camp Humphreys.
- 1998: FED hosted first Contractor Certification Course.
- 1999: New drill and well maintenance equipments arrived at FED.
- 2005: Enlisted dormitory and golf course at Osan Air Base opened.
- 2012: The new humidity controlled warehouse opened at Camp Carroll.
- 2013: Anisha Downs, FED project manager received the Modern-Day Technology Leader Award.

Sam Barnes, FED safety officer, teaches a session of FED’s first contractor certification course, 1997.

Surviving Block Leave
Don't become a victim of the season.
Plan ahead to survive your leave.

Ready ... or Not is a call to action for
leaders, Soldiers, Army Civilians and Family
members to assess their readiness for what
lies ahead - both the known and unknown.

Throughout our professional and personal lives, events
happen all around us. We are often able to shape the outcome
of those events, but many times we're not. Navigating life's
challenges is all about decision-making.

So are YOU ready ... or not?
